Von GustavoThis book offer knowledge about urban planning strategies and sustainable implementations. 100% recommended to architects and urban planning students. .

KurzbeschreibungA highly illustrated reference tool, this handbook provides comparative visual analysis of major urban extensions and masterplans around the world. It places an important new emphasis on the processes and structures that influence urban form, highlighting the significant impact that public or private landownership,

management and funding might have on shaping a particular project. Each of the books 20 subjects is rigorously analysed through original diagrams, scale drawings and descriptive texts, which are complemented by key statistics and colour photography. The case studies are presented in order of size rather than date or geographical location. This offers design professionals, developers and city planners, as well as students of architecture and urban design informed organisational and formal comparisons, leading to intriguing insights. A wide geographical range of contemporary and historic masterplans are featured. These encompass European projects from the 19th century to the present day: Belgravia in London, Sarphatipark in Amsterdam, Potsdamer Platz in Berlin, La Defense Seine Arche in Paris and Hammarby Sjstad in Stockholm. In North America, the postwar development of Stuyvesant Town in Manhattan is also the subject of a case study. More recent and ongoing international urban schemes are included, such as Puerto Madero in Buenos Aires, Downtown Dubai and the New Central Business District in Beijing.

Pressestimmen'...this substantial book is less an instruction manual for urban development and more a deep resource for architects, urban designers, planners and other development professionals.' (Building Design, June 2013)'This well-researched handbook provides readers with a comprehensive, in-depth and historic evaluation of some of the most recognisable international urban landscapes created over the last 200 years.' (Building Engineer, August 2013)
